The best CMS

© <http://www.gulp2.com/>

Do not believe your eyes!

CMS ASP NET "The Website Creator"-code name Gulp! 2.0 latest version- , it's a web platform appositely formed to overcome the single site management, allowing a whole network implant, composed by countless web sites, provided with forum, photos album, social utilities, all of this install application only once on a shared hosting, supported by ASP.NET.

It isn't a simple CMS, because of utilities within that go over and above editing and content format. Web application releases his power by advanced technologies multi-threading that, combined to new technology introduced by multi-core processors, maximize each function in order to give an unique and one-off surfing experience to the visitor.

The latest version application combines sophisticated algorithms that nullify query's latency period (database aren't there at all!), permitting a fluidity navigation up to 10X speed, quickness obtained thanks to the algorithm incredible power that elaborate dynamically the contents.

Between the most appreciated distinctive features of this CMS it includes characteristics as:

- It's completely free, no need any activation, royalty payment or subscription.
- It's distributed with source code .
- Multi Network support (or rather permit the creation of infinitive sites with different dominos , with a single installation on an hosting, even with a reduced power).
- Native multi language support (allow to build up immediately web sites with more languages).
- Incredible fast and performing (10 X)
- CMS part is extremely perceptual and allow to classify contents in an apposite menu.

When there are words or phrases in a content, referring to others contents, automatically becoming links.

- The application run in multi server configuration, in that case come out a special pipeline that connects its different instances between them , on different machines.
- An incredible technology for a speed realization of Plug-in, writing few codes.
- PDF format contents dynamic generation.
- Support and dynamic feeds RSS generation.
- An owner forum dividable for thematics and able to individuate related themes.
- Integrated features to suggest polls.
- Advanced management of photo albums, disposed in folders and subfolders.
- Images and photos available also as virtual postcards to create a virtual advertising effect.
- Easiness to use video embedding, automatically analyzed and recognized video format of the source and associated to the most appropriate player.
- Social network ready to use (create friends list, chatting with other users, etc).
- PayPal IPN ready to use (integrated libraries to build up plug-in operating with PayPal payment system).
- Advanced SEO features as for example use of tag google-off and google-on to remove decorative parts of xhtml flux; Dynamic add of described attributes EXIF to the images; It removes from the dynamic site-map contents already index-linked by google, therefore forcing the insertion of what it needs; Entrapment in the site of other browsers visitors; Aggregator modifies contents acquired using a synonym dictionary so that seem original; all xhtml contents have their similar dynamic PDF (it doesn't occupy space on the disk) in order to increase page-

rank.

- Site-map generated dynamically and in a clever way.
- Refined and advanced content aggregator able to acquire the omitted parts of the feed contents.

- Template to supporting inheritance characteristics.

- Some plug-in are distributed with base application, among which the programmable robot that offers assistance through a private session chat and simulate human being, putting trust to the potential clients, pushing them to accomplish purchase or completing order.

Installation is really easy, it's enough copy by FTP your package contents on your web space (the latter must supports ASP.NET 4.0).

Enable the scripture permissions of the app_data directory.

The first users you register will have admin role.

Instant support, also available in Italian, by the follow web site://www.cmsaspnet.com/

Any software application represents a meticulous and scrupulous work, and who develops it must have the same ability of a chess player, foreseeing and calculating every, single algorithm working and, for this reason, software developed by more people always present considerable security bugs, it's like a team of chess players who decides to play a game against an opponent: it's not like an addition of each member intelligence, in the best case it can happens that the best player is able to impose the best move but, there's also the risk that the more stupid damages the team and causes the loss. For that reason, the CMS official version is conceived and realized by a single developer who distribute application and source code, in this way anyone can suggest improvements or adapting at best the application to own needs. Scrap your old CMS made by amateurs, and hand to something that can give you results at once!

Installation:

- Copy all content via ftp into your hosting
- Add write permissions to the App_Data directory
- Register a user: The first will be the administrator
